

### Integral Drivers

- Operate at significantly cooler temperatures
- Enhanced wind cooling at the top of the pole
- No impact to wind load
- 100K hour rated life
- Disconnects, surge protection, fixture fusing, control cards are all at base of pole
- Techline's TSL800 fixtures with integral drivers have a proven track record with virtually zero failures over tens of thousands of installations

### Remote Drivers

- Mounted in single enclosure
- Create higher temperatures, accelerating component failure
- Require higher DC voltage
- Shorter fixture life
- Higher failure rates
- Require 9x more wiring and connectors
- Much greater risk of failure
